04 Residential Shotblasting & Grinding

Surface preparation for garage coatings, basement floors, patios, adhesive removal, and repairs.

WHAT IT IS

Residential grinding and surface preparation remove old coatings, glue, weak surface material, and contaminants so the next finish can bond correctly.

HOW IT'S DONE

- Inspect the existing slab, old paint, adhesive, sealer, or residue and choose the tooling needed for the final system.
- Use compact grinders or surface-prep equipment with dust collection, edge work, and careful protection around the home.
- Vacuum and clean the prepared surface so it is ready for coating, sealing, leveling, patching, or polishing.

WHAT TO EXPECT

Surface prep is mechanical and can be noisy. Surflex sets expectations, protects nearby finishes, and keeps the workspace controlled and orderly.

FINAL RESULTS

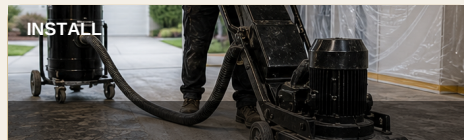

A clean, profiled residential slab that is ready for the finish system and less likely to suffer adhesion or appearance problems later.

Built for occupied homes, garages, basements, patios, and homeowners who expect clean work.

Surflex Systems brings 20+ years of practical experience, trained crews, safety-focused planning, and quality workmanship to residential concrete restoration. We protect walls, trim, doors, landscaping, storage, and household access, use mock ups or samples when finish expectations need confirmation, and leave the work area cleaner, safer, and more useful than we found it.

Old coatings, glue, weak concrete, and household protection needs are reviewed.

Surface preparation is performed with compact equipment and dust collection.

The slab is vacuumed and ready for coating, sealing, leveling, or polishing.
