09 Striping & Facility Markings

Organized traffic paths, warehouse aisles, safety zones, equipment areas, and parking layouts.

WHAT IT IS

Striping and facility markings help people, vehicles, and equipment move through a property with better clarity and control.

HOW IT'S DONE

- Lay out traffic paths, work zones, parking stalls, safety areas, equipment pads, or warehouse aisles.
- Clean and prepare the surface, mask or stencil the markings, and apply traffic-rated paint, epoxy, or urethane.
- Coordinate colors, line widths, symbols, and access phasing so active operations can continue when practical.

WHAT TO EXPECT

Surflex keeps layouts neat, edges crisp, and work zones controlled so markings are installed without disrupting more of the site than necessary.

FINAL RESULTS

A better organized facility with durable markings that support safety, navigation, housekeeping, and professional appearance.

Built for active facilities, empty spaces, and customers who expect it done right.

Surflex Systems brings 20+ years of practical experience, properly trained crews, safety-focused planning, quality workmanship, appropriate product submittals, and mock ups when needed so the final product matches the expectation. We protect the site, work clean, and aim to leave every space better than we found it.

Traffic paths, aisles, work zones, parking stalls, and safety areas are measured.

Clean lines are masked, stenciled, and placed with traffic-rated coatings.

Phasing, cure timing, and access planning help active facilities keep moving.
