07 Residential Floor Leveling & Surface Correction

Correct low spots, uneven garage slabs, basement transitions, and floor-ready concrete surfaces.

WHAT IT IS

Residential floor leveling and surface correction improve uneven concrete before coatings, polishing, flooring, garage use, or basement finishing.

HOW IT'S DONE

- Check high spots, low spots, transitions, drainage concerns, and the finish or flooring that will follow.
- Grind high areas, clean and prime low areas, then place leveling compound, underlayment, or patching material.
- Verify transitions and cure timing so the surface is ready for the homeowner's next step.

WHAT TO EXPECT

Leveling work needs clear access, surface preparation, cure time, and protection from traffic while materials set.

FINAL RESULTS

A smoother, safer, more usable residential concrete surface ready for coatings, flooring, garage use, or basement build-out.

Built for occupied homes, garages, basements, patios, and homeowners who expect clean work.

Surflex Systems brings 20+ years of practical experience, trained crews, safety-focused planning, and quality workmanship to residential concrete restoration. We protect walls, trim, doors, landscaping, storage, and household access, use mock ups or samples when finish expectations need confirmation, and leave the work area cleaner, safer, and more useful than we found it.

PREP

High spots, low spots, transitions, and the next finish are confirmed.

INSTALL

Grinding, priming, leveling, or patching is sequenced by area.

HANDOFF

The corrected surface is checked for transitions and next-step readiness.
