02 Epoxy Coatings

Protective floor coating systems built for traffic, spills, washdowns, and hard daily use.

WHAT IT IS

Epoxy coatings create a sealed floor surface for facilities exposed to forklifts, chemicals, abrasion, moisture, spills, and heavy traffic.

HOW IT'S DONE

- Evaluate substrate condition, moisture exposure, traffic demands, chemical exposure, and desired texture.
- Mechanically prepare the slab, repair cracks or defects, then install primer, build coats, broadcast media when needed, and a protective topcoat.
- Submit product data, color/texture selections, and mock ups when the customer needs finish confirmation before installation.

WHAT TO EXPECT

Work areas are protected, edges are controlled, cure times are communicated, and traffic is phased when work must happen inside an active facility.

FINAL RESULTS

A clean, durable coating system selected for the space, with the right profile, thickness, slip resistance, and appearance for the intended use.

Built for active facilities, empty spaces, and customers who expect it done right.

Surflex Systems brings 20+ years of practical experience, properly trained crews, safety-focused planning, quality workmanship, appropriate product submittals, and mock ups when needed so the final product matches the expectation. We protect the site, work clean, and aim to leave every space better than we found it.

PREP

Surface profile, moisture awareness, repairs, masking, and product submittals.

INSTALL

Primer, build coats, broadcast media when needed, and selected topcoat.

HANDOFF

Cure timing, access plan, slip-resistance expectation, and cleaning guidance.
