01 Mechanical Polishing

Diamond-ground polished concrete floors for clean, durable, low-maintenance performance.

WHAT IT IS

Mechanical polishing turns dull, worn, or previously covered concrete into a smooth working surface with refined aggregate character and a professional finish.

HOW IT'S DONE

- Inspect the slab, protect adjacent finishes, and confirm the intended sheen, exposure, and use.
- Grind with progressive diamond tooling, control dust with HEPA collection, apply densifier when appropriate, and polish to the selected finish.
- Provide submittals, sample areas, or mock ups when the finish expectation needs to be confirmed before full production.

WHAT TO EXPECT

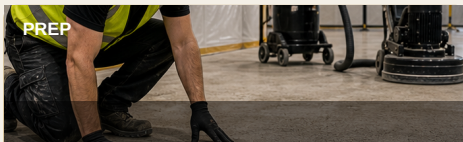

You can expect a sequenced work zone, controlled dust practices, coordination around active or empty spaces, and a crew trained to keep access, housekeeping, and safety in focus.

FINAL RESULTS

A refined concrete floor that is easier to clean, better looking, and ready for offices, showrooms, warehouses, production areas, and high-traffic commercial spaces.

Built for active facilities, empty spaces, and customers who expect it done right.

Surflex Systems brings 20+ years of practical experience, properly trained crews, safety-focused planning, quality workmanship, appropriate product submittals, and mock ups when needed so the final product matches the expectation. We protect the site, work clean, and aim to leave every space better than we found it.

Slab review, edge protection, dust control, and tooling selection before production.

Progressive diamond passes, densifier when appropriate, and finish checks by area.

Cleaned floor, reviewed sheen, and guidance for maintenance and return to service.
