07 Floor Leveling & Surface Correction

Correct low spots, uneven transitions, wavy slabs, and trip-prone areas before the final system goes down.

WHAT IT IS

Floor leveling and surface correction create a more consistent substrate for coatings, polishing, flooring installation, equipment, and foot traffic.

HOW IT'S DONE

- Survey slab conditions, identify high and low areas, and confirm required tolerances or transition needs.
- Grind high areas, prepare and prime low areas, then place leveling compound, underlayment, patch, or repair material.
- Use mock ups or sample areas when the finish transition or final appearance needs customer approval.

WHAT TO EXPECT

Expect measured layout, preparation, material placement, cure-time coordination, and clean handoff for the next trade or final Surflex finish.

FINAL RESULTS

A safer, cleaner, more usable surface with better transitions and a stronger foundation for the intended final floor system.

Built for active facilities, empty spaces, and customers who expect it done right.

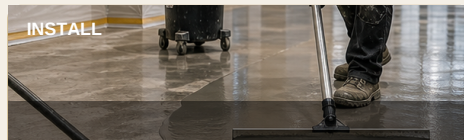

Surflex Systems brings 20+ years of practical experience, properly trained crews, safety-focused planning, quality workmanship, appropriate product submittals, and mock ups when needed so the final product matches the expectation. We protect the site, work clean, and aim to leave every space better than we found it.

PREP

High spots, low spots, trip points, transitions, and tolerance needs are marked.

INSTALL

Grinding, priming, leveling compound, underlayment, or patching is sequenced by area.

HANDOFF

The corrected floor is prepared for coatings, polishing, flooring, equipment, or traffic.
