06 Concrete Patching & Wall Repair

Hydraulic grout, patching mortar, spalls, penetrations, and vertical repairs made sound before finish work.

WHAT IT IS

Concrete patching and hydraulic grout repair rebuild damaged or leaking concrete details in utility rooms, pump station basements, slabs, walls, curbs, and penetrations.

HOW IT'S DONE

- Remove unsound material, profile edges, clean the substrate, and identify whether the repair needs water-stop hydraulic grout, repair mortar, epoxy mortar, or cementitious patching.
- Pack, inject, or trowel the selected material into prepared cracks, voids, pipe penetrations, wall defects, spalls, and slab repairs.
- Finish the patch, shape transitions, and coordinate cure or return-to-service requirements before coating, sealing, or facility use.

WHAT TO EXPECT

The crew protects pumps, piping, walls, floors, and adjacent finishes, manages debris and moisture, and keeps the work area orderly while repairs cure or become ready for the next step.

FINAL RESULTS

Sound repaired concrete that performs better in wet or service-heavy spaces and supports the coating, sealing, waterproofing, or protection system that follows.

Built for active facilities, empty spaces, and customers who expect it done right.

Surflex Systems brings 20+ years of practical experience, properly trained crews, safety-focused planning, quality workmanship, appropriate product submittals, and mock ups when needed so the final product matches the expectation. We protect the site, work clean, and aim to leave every space better than we found it.

PREP

Leaks, spalls, pipe penetrations, substrate condition, and active service needs are reviewed.

INSTALL

Hydraulic grout, patching mortar, or epoxy mortar is placed into prepared concrete.

HANDOFF

Repairs are finished for service, coating, sealing, waterproofing, or follow-on protection.
