02 Residential Epoxy Garage Coatings

Durable garage and home-workshop floor coatings for daily parking, storage, spills, and cleanup.

WHAT IT IS

Residential epoxy and protective coatings create a sealed, easier-to-clean garage or workshop floor that can handle vehicles, foot traffic, storage, and routine household use.

HOW IT'S DONE

- Evaluate the slab, moisture conditions, cracks, traffic needs, color, texture, and slip-resistance expectations.
- Mechanically prepare the concrete, repair defects, mask edges, then install primer, body coat, broadcast media when selected, and topcoat.
- Coordinate cure time, ventilation, parking, and return-to-use timing so the household knows exactly what to expect.

WHAT TO EXPECT

The work area needs to stay clear while the coating cures. Surfex protects adjacent walls and belongings, communicates timing, and keeps edges neat.

FINAL RESULTS

A durable coated garage floor with a finished residential look, improved cleanability, and protection from normal traffic, spills, and wear.

Built for occupied homes, garages, basements, patios, and homeowners who expect clean work.

Surflex Systems brings 20+ years of practical experience, trained crews, safety-focused planning, and quality workmanship to residential concrete restoration. We protect walls, trim, doors, landscaping, storage, and household access, use mock ups or samples when finish expectations need confirmation, and leave the work area cleaner, safer, and more useful than we found it.

Surface profile, moisture awareness, repairs, masking, and color/texture choices are confirmed.

Primer, body coat, broadcast media when selected, and topcoat are installed neatly.

Cure time, parking timing, slip resistance, and cleaning expectations are reviewed.
